Clinpro™ Preventive Products

Clinpro™ Tooth Crème
0.21% Sodium Fluoride
Anti-Cavity toothpaste with fTCP

950 ppm NaF with patented functionalised Tri-Calcium Phosphate (fTCP) that remineralises the tooth and aids in the reversal of white spot lesions.

\$20.90 EACH

Clinpro™ White Varnish
5% Sodium Fluoride White Varnish

22,600 ppm NaF with patented functionalised tri-calcium phosphate (fTCP) – flows smoothly and inter-proximally on moist or dry teeth and sets rapidly in the presence of saliva without any yellow colouring.

\$275.00 BOX 100

Clinpro™ XT Varnish

Fluoride-releasing durable coating that seals and protects dentine tubules to relieve hyper-sensitivity and lasts up to 6 months.

\$275.00 EACH

Clinpro™ Sealant

Patented colour-change technology – goes on pink to see placement, then cures to a natural white. Low viscosity and fluoride-releasing.

\$121.00 KIT

High Fluoride Toothpaste now available:

Clinpro™ 5000

1.1% Sodium Fluoride Anti-Cavity Toothpaste

Patient-friendly: Aids compliance.

Low abrasion:

Provides gentle, effective cleaning and is comfortable for patients to use even on exposed root surfaces.

One-step compliance:

Clinpro™ 5000 Anti-Cavity Toothpaste simply replaces your patient's current brushing regimen.

Patient-friendly flavour:

Clinpro™ 5000 is available in a mild Vanilla Mint flavour, suitable for patients 6 years or older.

Convenient flip-top 113 g tube:

Lasts six months, so it's easy to renew at each appointment.

\$19.50 EACH

Consumer Medicine Information – Extract. Indications: Clinpro™ 5000 is a fluoride toothpaste for use after recommendation by a dentist or healthcare professional, in the prevention of dental caries in high risk patients. It is usually used once a day in place of your conventional toothpaste unless instructed otherwise by your dentist or healthcare professional. **Pharmacist only Medicine** – available from your dentist or healthcare professional. **One-step compliance:** Apply a thin ribbon or pea-sized amount of Clinpro™ 5000 to a soft-bristled toothbrush and brush teeth for at least two minutes. After brushing, adults should expectorate. Children 6 to 16 years of age should expectorate and rinse mouth thoroughly with water. For best results, do not eat or drink for 30 minutes after use. Follow these instructions or use as directed by a dentist or healthcare professional. **Contraindications:** Not recommended for use in children under 6 years of age. Do not use Clinpro™ 5000 toothpaste if you have known allergic reactions or have hypersensitivity to any of the ingredients. If you are pregnant or breastfeeding, speak to your dentist or healthcare professional before use. For full precautions and warnings, refer to the Prescribing Information and Consumer Medicine Information at www.go.3m.com/clinpro5000au or www.go.3m.com/clinpro5000nz. Healthcare professionals should review the full Product Information before prescribing.

Sof-Lex™ Contouring and Finishing Systems

A full line of finishing and polishing solutions ... from beginning to end.

The Sof-Lex system is colour-coded from dark (coarse) to light (superfine) for an easily followed step-by-step process. Easy, pop-on mounting lets you quickly change discs or spirals—so you can move efficiently through your finishing and polishing procedure.

Sof-Lex™ Pop-on Contouring and Polishing Disc Refills - Blue Series (Bag of 85 single use discs)

Filtek™ Z250

Filtek™ Z250 Universal Restorative is a trusted restorative solution.

- Versatile, for anterior and posterior restorations
- Excellent handling, resists slumping, and virtually no sticking to instruments.
- Available in 12 shades

A universal dental composite resin that provides excellent handling and long lasting results.

Suggested Applications

- Direct anterior and posterior restorations.
- Core buildup.
- Splinting.
- Indirect restorations including inlays, onlays and veneers.

Filtek™ Supreme XTE Flowable Restorative

So many uses, so simple to use.

- Excellent aesthetics & adaptation
- Excellent polish retention & wear resistance
- True nanotechnology
- 12 shades

The dental flowable composite that is a dependable companion with many uses...it flows when you want it...stays where you need it.

Suggested Applications

- Class III and V restorations.
- Restoration of minimally invasive cavity preparations (including small, nonstress-bearing occlusal restorations).
- Base/liner under direct restorations.
- Repair of small defects in aesthetic indirect restorations.
- Pit and fissure sealant.
- Undercut blockout.
- Repair of resin and acrylic temporary restorations.

Filtek™ P-60 Posterior Restorative

Rapid cure time and excellent performance.

- Excellent packability — packs well without sticking to instruments
- Easy sculpting with exceptional resistance to slumping
- Excellent marginal adaptation and interproximal contact
- Low polymerization shrinkage

Easy handling and fast placement, you can rely on Filtek P60 Posterior Restorative for excellent results.

Suggested Applications

- Direct posterior restorations
- Core buildup
- Splinting
- Indirect restorations including inlays and onlays and veneers.

3M

Filtek™

Supreme XTE
Universal Restorative

Dentists everywhere love using it anywhere.

Dentists around the world have made 3M™ Filtek™ Supreme XTE Universal Restorative their composite of choice for more than **600 million restorations** worldwide ... and counting. As you'd expect from the global leader in aesthetic and restorative technologies, 3M's TRUE nanotechnology brings aesthetics and strength to every restoration – anterior or posterior – so your restorations will last and look beautiful, too.

\$98.00 SYRINGE

\$127.00 BODY SHADE CAPSULE

Filtek™

Universal Restorative

Your restorations.

Your composite.

Your day.

Universally simpler.

3M™ Filtek™ Universal Restorative with Natural Match technology — Just 8 designer shades, a universal opacity and a whiter Extra White let you meet most patient needs so you can improve efficiency without sacrificing aesthetics.

It's universally simpler.

\$89.90 SYRINGE

\$89.90 CAPSULE

3M Science.
Applied to Life.™

Wow! That was simple.

Single-unit crowns are vital to your clinical success and bottom line—but they can be tricky. For a crown to just drop into place and stay cemented, you have to do a lot of things right. That's why 3M has simplified success with the crown procedure. You'll reduce the chance for error and shorten procedure time simply by using our proven products ... from tissue prep to crown fabrication and seating. It's your simple formula for greater clinical, professional and personal success.

BROWNE HELIX TEST

BR3780

A successful Browne TST Helix test confirms steam penetration through the helix and confirms by implication that air and other non-condensable gases have been removed.

The chemical indicator located in the capsule will show a defined colour change from yellow to dark blue/ purple when exposed to a specific combination of time, temperature and steam. When all air has been removed from the steriliser chamber, steam will penetrate through the helix and the indicator will show a uniform colour change. If air or non-condensable gases are present they will impair contact between the steam and the indicator resulting in a non-uniform colour change; distinct yellow markings will be evident on the indicator.

INSTRUMENT REPROCESSING

Transfer of contaminated instruments and sharps

- ✓ Instruments should be carried to the sterilising area in a cassette or in a container that is preferably lidded and puncture-proof, to minimize handling and prevent potential for a penetrating injury if the container is dropped.

Remember: instruments must pass in one direction only from contaminated to clean!

Cleaning

- ✓ Gross bioburden should be cleaned at chair side.
- ✓ Pre-cleaning saves time and ensures bioburden does not dry and harden on instruments making them more difficult to clean.

Cleaning rotary nickel-titanium endodontic files:

- ✓ Immediately after use remove stoppers and insert the files into a scouring sponge soaked with chlorhexidine gluconate aqueous solution;
- ✓ Clean the files by using 10 vigorous in-and-out strokes in the sponge;
- ✓ Place the files in a wire mesh basket and immerse in a suitable enzymatic cleaning solution for 30 minutes;
- ✓ Follow this by 15 minutes ultrasonification in the enzymatic cleaning solution;
- ✓ Drain and rinse in running water for 20 seconds;
- ✓ Proceed to steam sterilisation.

A dental practice intending to reprocess rotary NiTi endodontic files should closely follow the above protocol. If a dental practice quarantines rotary files for a single patient for a course of treatment for the one tooth, they should follow this validated protocol. Moreover, reprocessing of root canal files is for NiTi files only, not for stainless steel files which must be single-use.

ET.FOAM Enzymatic Transportation Foam

- Ready to use, instrument pre-cleaning solution
- Breaks down bioburden to speed up cleaning process
- Keeps soiled instruments moist
- Ideal for use prior to instrument washers – rinse prior to placing in instrument washer
- Neutral pH, non-corrosive formula will not harm most metals, plastics, rubber or corrugated tubing
- Free rinsing, enzyme boost

\$38.50 1L BOTTLE

GZYME³ Triple Enzymatic Ultrasonic Cleaner

- Penetrates and removes organic matter from all surgical and dental instruments, as well as flexible and rigid scopes
- Quickly loosens and dissolves preteinaceous deposits
- Bacteriostatic to prevent additional microbial growth
- Neutral pH formula is mild on instruments
- Non-corrosive, low foaming, free-rinsing, economical

SUPERSONIC Ultrasonic Solution

- Convenient ready to use pouch requires no measuring
- Formulated to lift and remove proteinaceous and other organic matter such as blood, mucous and tissue from dental instruments
- Bacteriostatic to prevent additional microbial growth
- Cleans rapidly in less than 1 minute
- Non-corrosive formula contains special rust inhibitors that will not harm stainless steel instruments

\$154.00 PACK 48 X 30ML

ENVIRONMENT

- ✓ A neutral detergent and warm water solution or commercially packaged pre-moistened, neutral detergent wipes should be used for all routine and general cleaning.
- ✓ Neutral pH detergents are best for environmental cleaning because they are less likely than acid or alkaline detergents to damage metals such as stainless steel or to cause skin irritation.
- ✓ Neutral detergents also leave little residue on surfaces.
- ✓ The spittoon should be cleaned after each patient by wiping with neutral detergent using disposable paper towels.

NED Neutral Detergent

- Ideal for surface/equipment cleaning between patients
- Gentle surfactants remove soil and debris from surfaces without irritation to the hands or adverse effects on surfaces/equipment.
- Neutral pH, alcohol free, rinse free
- Non-toxic, non-ionic, biodegradable
- Soft, non-linting cloth
- 160x wipes –15 x 17cm

GAMACIDE³

Surface Disinfectant Cleaner – Instrument Grade Intermediate Level Disinfectant

GamaCide³ is the ideal surface disinfectant for your cleaning and disinfecting needs. Made with your safety and convenience in mind, GamaCide³ kills bacteria, viruses, TB and fungi with a single 3-minute contact time. GamaCide³ can quickly and easily be applied to all dental surfaces for superior infection control. For use in hospitals, dental offices, surgical facilities, neonatal & infant care units, plasma pheresis and blood centers, GI/pulmonary endoscopy labs, dialysis units and other areas where strict control of cross contamination is critical.

| | |
|--|--|
| Safe for you, your workplace & our environment | Can be applied to both hard and soft surfaces including: plastic, ceramic, stainless steel, chrome, acrylic, leather, vinyl, glass, Plexiglas®, and baked-on surfaces. |
| | Non-flammable. No special shipping or storage is required. |
| | Is non-sticky & leaves no hazardous chemical residue when used as directed. Dye-free |
| | Is compatible with most impression materials and dentures. |
| | Is biodegradable. |
| Effective | Can safely be disposed via standard waste disposal methods. |
| | Most effective broad spectrum kill available in Canada — exceeds healthcare guidelines and standards. |
| | Bactericidal, Fungicidal, Virucidal and Tuberculocidal GamaCide ³ effectively kills the following microorganisms at room temperature: Mycobacterium terrae ATCC 15755, Staphylococcus aureus ATCC 6538, Pseudomonas aeruginosa ATCC 15442, Salmonella choleraesuis ATCC 10708, Poliovirus 1 strain Chat ATCC VR-1562, Influenza A viruses, including H1N1, Trichophyton mentagrophytes ATCC 9533, Herpes Simplex 1 Virus |
| Fast | Ready to use. No mixing or fussing. |
| | 3 Minute broad spectrum kill! Cleaning and disinfection in one solution. |

Safe, effective and fast!

HOW D-VAC WORKS

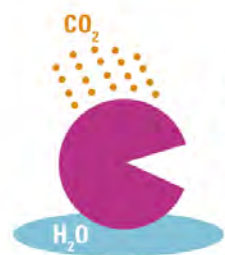

Friendly bacteria emit enzymes.

Enzymes liquify solid organic waste.

Friendly bacteria absorb liquified organic waste.

After absorbing liquified waste, friendly bacteria give off harmless carbon dioxide and water by products.

Bacteria multiply and continue this process until all solid organic waste is eliminated.

EVACUATION SYSTEM CLEANING

Clinical Problems Associated with Suction System Asepsis:

1. **Hose Design.** Most hoses consist of series of convex & concave surfaces which provide operator with flexible, tangle-free line, but allow niches that harbour dried protein debris laden with microorganisms.
2. **Infrequent Flushing.** In most offices, flushing of lines is not performed after each patient treatment. Sporadic cleaning allows thorough drying of protein debris (blood & saliva) onto internal surface of lines, & protein provides protection & nutrients for microbial growth & reproduction.
3. **Short Contact Time of Cleaners.** When lines are flushed, contact time of materials used is too short to dislodge dried material & kill microorganisms. Culturing of lines in active dental operatories showed counts up to 100 million organisms per millilitres of fluid.
4. **Popular Cleaners Do Not Remove Well.** Materials generally used for flushing lines, such as old instrument disinfecting solutions, household cleaners, & tap water are not effective

DUAL PURPOSE MICROBEX MICROVAC Evacuation System Cleaner + Ultrasonic Cleaning Solution

- 2 in 1 multipurpose cleaner with a unique low foaming multi-enzyme formula
- Effectively removes organic debris, bioburden and proteinaceous materials
- Routine use helps avoid costly line repairs and downtime
- Non-corrosive, neutralizes odours, phosphate free
- Economical

\$77.00 4L BOTTLE

D-VAC Evacuation System Cleaner

- An environmentally friendly combination of enzyme-creating bacteria that immediately break down and "eat" organic matter, resulting in clean and deodorised suction lines
- Easy to use — measure, dilute and suction right from the bottle
- Works continuously, producing residual action between uses
- Contains no harsh or hazardous chemicals
- Non-foaming, amalgam separator friendly
- Safe on plastics, metals or carbon filters
- Mild formulation with pH range 7±1

Germiphene Infection Control Solutions

ALCOHOL-BASED HAND RUB

Dental staff must be educated on the correct use of ABHR and handwashing products, and caring for their hands.

- ✓ The Hand Hygiene Australia (HHA) protocol is to use an alcohol-based hand rub (ABHR) for all clinical situations where hands are visibly clean.
- ✓ The normal routine in dental practice should be for dental staff to use ABHR between patient appointments and during interruptions within the one appointment.
- ✓ ABHR is applied onto dry hands and rubbed on for 15–20 seconds, after which time the hands will be dry.
- ✓ Hand hygiene is required after removal of gloves. This must be done before the dental practitioner writes or types up patient notes. Hand gel is used again immediately before gloving for the next patient.
- ✓ ABHR must only be used on dry skin; wet hands dilutes the product thus decreasing its effectiveness.
- ✓ Typically, suitable ABHR will contain a skin emollient to minimise the risk of skin irritation and drying, have minimal colour and fragrance, and will leave the hands in a dry state after being rubbed in for 15–20 seconds.
- ✓ Bottles of ABHR should not be 'topped up' because the outside of the dispenser may become contaminated. Empty dispensers should be discarded and not reused.

The Health
of your clinic is in your
Hands

ACTIVA™ BioACTIVE

A Composite for Every Generation

BioACTIVE For Better Patient Outcomes:

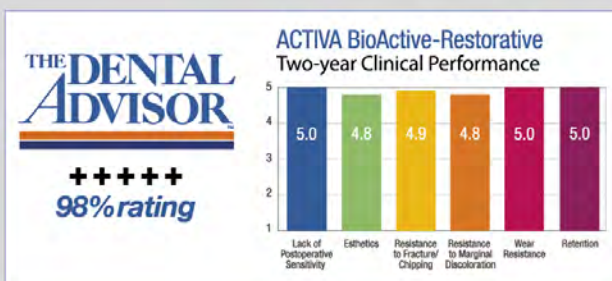

- Provides the minerals teeth need to stay healthy
- Seals out microleakage
- Remarkably aesthetic and versatile
- Tough, durable, and reliable

#ACTIVABioACTIVE

\$143.00 REFILL

\$231.00 INTRO KIT WITH DISPENSER

ACTIVA BioACTIVE products are the first dental resins with a bioactive ionic resin matrix, shock absorbing rubberized resin component, and reactive ionomer glass fillers that mimic the physical and chemical properties of natural teeth. These bioactive materials actively participate in the cycles of ionic exchange that regulate the natural chemistry of our teeth and saliva and contribute to the maintenance of tooth structure and oral health.

GENIUS 9000

Know you're getting a superior clean* with the Oral-B GENIUS 9000 electric toothbrush. This highly advanced brush features a dentist-inspired round head that surrounds and cups each tooth with dynamic oscillating, rotating and pulsating movements to remove up to 100% more plaque than a regular manual toothbrush.

*vs a regular manual toothbrush

OSCILLATING-ROTATING-PULSATING TECHNOLOGY

and dentist-inspired round brush head clean tooth-by-tooth, reaching areas that are often missed by differently shaped brush heads

PRESSURE SENSOR

The Smart Ring illuminates to alert you when you brush too hard while speed decreases and pulsations stop

PROFESSIONAL TIMER

The built-in 2-minute timer helps you brush the right amount, with a timer for each zone of your mouth

POSITION DETECTION

The advance Position Detection technology of the GENIUS 9000 allows you to SEE where you're brushing so you can ADJUST your technique and never miss a zone

INTELLIGENT BRUSH FOR REAL-TIME FEEDBACK

Download the Oral-B App on your smartphone and use Bluetooth technology to get real-time feedback while you clean for improved brushing habits

CUSTOMISABLE SMARTRING

Visible from every angle while brushing, the SmartRing allows you to see feedback from the pressure indicator, brushing timer and Bluetooth connection with ease. It can also be programmed through the Oral-B smartphone app to illuminate with your choice of 12 colours as you brush

DUAL CHARGING & EXTRA-LONG BATTERY LIFE

features a cutting-edge Lithium Ion battery and smart travel case that's designed to charge both your toothbrush and smartphone using only one outlet, all while delivering long-lasting, consistently powerful cleaning action for up to 12 days between charges

Tokuyama Restorative

BOND FORCE REFILL & PEN

Tokuyama Bond Force is a 7th generation single component, self-etching, fluoride releasing bonding agent. Tokuyama Bond Force creates a 3-D link to the tooth generating an extremely strong bond to enamel and dentin. Tokuyama Bond Force requires only 1 application, and is designed to be used on both cut/uncut enamel and dentin.

Tokuyama Bond Force is available in bottle or unit dose.

Indications

- Bonding of light- or dual-cured composite material to:
- Cut/uncut enamel,
- Cut/uncut dentin,
- Fractured porcelain/composite for repair.

\$132.00 REFILL

\$88.00 PEN

Benefits

- Outstanding bond strength
- Designed for cut/uncut enamel and dentin
- Only 1 application required
- No etching, No rinsing, No mixing
- Fluoride releasing
- Thin film thickness
- Less technique sensitive
- Available in both bottle and unit dose

Tokuyama Dental

BUY 2 BOND FORCE AND GET ONE FREE

SHIELD FORCE® PLUS

Shield Force Plus is an advanced light-cured, resin based desensitizer that delivers immediate and long-term relief for pre-op, post-op, and other forms of dentinal sensitivity.

Indications

- Treatment for hypersensitivity caused by gingival recession and cervical erosion
- Alleviation and/or prevention of sensitivity after tooth preparation for direct and indirect restorations
- Reduction of abrasion and erosion of exposed dentin

Improved Bond Strength for Every Restoration

Placing Shield Force Plus under each restoration has proven to increase bond strength. Shield Force Plus can be placed under every direct or indirect restoration to prevent pre-op and post-op sensitivity, as well as to prevent contamination.

Glutaraldehyde Free

Shield Force Plus is a resin based desensitizer that is completely glutaraldehyde free. Irritation-free and non-toxic, Shield Force Plus can be used safely even with patients that suffer respiratory conditions such as asthma, as opposed to other Glutaraldehyde containing products.

AWARDED TOP UNIVERSAL COMPOSITE 10 YEARS IN A ROW

ESTELITE SIGMA QUICK Supra-Nano Filled Universal Composite

The miracle match

Estelite Sigma Quick is a universal, supra-nano filled dental composite that utilises 100% spherical fillers (82% by weight/ 71% by volume). This unique world-class technology delivers a flexible shade matching process, exceptional aesthetics and long-term wear resistance.

SIMPLE

- Utilising supranano spherical fillers, one shade can invisibly **blend within several shades**.
- Creamy, non-sticky consistency for **easy handling**.
- **Extended working time of 90 seconds** under ambient light, with only **10 seconds** light-curing.

BEAUTIFUL

- **High diffusion and refraction of light** results in a superior blending effect.
- **Resists slumping** for effortless sculpting
- **Exceptional polishability** reaching over ***90% glossiness** in only **60 seconds**.

LASTING

- **Reduced abrasion for long-term** wear resistance.
- Low **1.3% linear shrinkage** resists marginal leakage.
- **Low shrinkage stress** for lasting patient comfort.
- Retained levels of **surface smoothness** for a **lasting polish**.

**BUY 4 AND

FREE**

Indications

- Anterior and posterior restorations
- Composite veneer
- Diastema closure
- Composite/porcelain repair

Features & Benefits

- Superior wear resistance
- Less wear to opposing teeth
- Exceptional handling
- Extended working time — 90 seconds
- Outstanding polishability
- High gloss retention over time
- Quick curing time — 10 seconds
- 1.3% linear shrinkage
- Good radiopacity

Tokuyama Restorative

TOKUYAMA ESTECER II

Estecem II is a dual-cure (light and/or self-cure), radiopaque, adhesive resin cement system with excellent handling, aesthetic and adhesive properties to teeth and all prosthetic materials. The main components of the Estecem II are: Estecem II Paste (A/B) and Tokuyama Universal Bond (A/B). Tokuyama Universal Bond promotes the adhesion of Estecem II Paste to tooth structure. Tokuyama Universal Bond also enhances the adhesion of Estecem II Paste to all prosthetic materials without the use of a separate primers.

Indications

- Cementation of crowns, bridges, inlays, and onlays made of glass/oxide ceramics (porcelain, zirconia and alumina), metals/alloys (precious and non-precious) and resin materials including inorganic filler (composite materials)
- Repair of fractured porcelain fused to metal crowns and all ceramic restorations
- Cementation of veneers
- Cementation of adhesion bridges
- Cementation of metal or resin cores, metal or glass and quartz fibre posts

Characteristics

- Reliable Adhesion over time and with all prosthetic material
- Flexural Strength and Elastic Modulus as a guarantee of long durability of the cementation
- Superior aesthetics
- Ease of use, simple and fast removability of excess cement
- Colour Stability over time

ESTELITE UNIVERSAL FLOW

Resin-based dental restorative Material

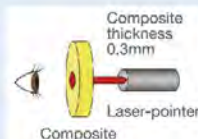

Excellent aesthetics - wide and natural colour matching

ESTELITE UNIVERSAL FLOW is designed to allow for the restoration of most cases using single shade composites. This is due to its superior shade matching/colour blending effects.

The colour compatibility of ESTELITE UNIVERSAL FLOW A2 shade when it is filled in each artificial tooth (B1, A1, B2, A2, C1, A3) after creating a cavity 4mm in diameter and 2mm deep. By using black light, we can see the fluorescence of ESTELITE UNIVERSAL FLOW where it was filled.

High Light Diffusion

Estelite Universal Flow has the highest light diffusion by laser-transmission test. It is possible to achieve wide colour matching and an invisible margin.

UNIVERSAL BOND *Active-chemistry triggers self-curing and provides high-bond strength.*

Dentavision is proud to announce the launch of Tokuyama Universal Bond, a two-component universal adhesive that does not require surface agitation, light-curing, or wait time after placement. A quick and easy application cuts chair time especially in multi-tooth preparations.

Universal Bond can be used in all etching techniques: self-etch, total-etch and selective-etch mode for direct and indirect restorations. It has been designed to be fully compatible with light-cured, self-cured and dual-cured composite materials. As a true universal adhesive, Universal Bond does not require additional activators or primers, saving inventory costs and hassle.

Tokuyama Universal Bond offers high bond strength to polymerisable resin material (adhesive resin cement, acrylic resin and composite resin) to indirect restorative materials such as glass-ceramics (porcelain), oxide-ceramics (zirconia and alumina), metals (precious and non-precious) and resin materials including inorganic filler. Tokuyama Universal Bond has virtually no post-op sensitivity.

QUICK & EASY APPLICATION

- ✓ No need to light cure for 10-20 seconds
- ✓ No need to agitate on surface for 10-20 seconds
- ✓ No need to wait between placement and air-dry polymerisation step

\$121.00 INTRO KIT

BUY 2 UNIVERSAL BOND AND GET ONE FREE

ESTELITE POSTERIOR

Developed for optimal posterior restorations allows you to place dependable restorations with ideal handling, reliable physical strength and quick curing properties (10 seconds). By implementing Tokuyama's patented innovative initiator system, "Radical Amplified Photopolymerisation (RAP) Technology" ESTELITE[®] POSTERIOR offers the clinician a reduced curing time without sacrificing working time.

Benefits

- Ideal handling - Optimal stiffness, easy to shape, non sticky
- Prominent physical strength - High flexural and compressive strength
- Exclusive posterior shade availability - PA1, PA2, PA3, PCE (Clear Enamel)
- Quick curing time - 10 seconds with a halogen light ($\geq 400\text{mW/cm}^2$)
- Ample working time - 50 seconds under an ambient light (10,000 lx)

Indications

- Direct posterior restorations (including the occlusal surface)
- Repair of porcelain/composite

Irradiation time for Polymerisation

- Halogen 800mW/cm^2 : 5-10 sec.
- Plasma 950mW/cm^2 : 3 sec.
- LED 900mW/cm^2 : 5-10 sec.

OPTRAGATE®

Moisture control made easy

Adequate isolation is essential for the successful placement of direct restorations to avoid any contamination of the cavity with saliva, secretion and blood. Often, relative isolation is already sufficient to achieve good results and patient acceptance is high for this form of isolation. Irrespective of whether you are placing a composite filling or cementing a ceramic restoration, OptraGate is an effective and efficient aid that forms a sound basis for the long-term clinical success of aesthetic restorations.

TOFFLEMIRE MATRIX BANDS

Tofflemire matrix bands are precontoured buccally/lingually and occlusally/gingivally. They facilitate the creation of interproximal contours necessary to recreate the contact areas and natural convex anatomy of the interproximal area. Their memory-free, soft, stainless steel composition allows perfect and continuous adaptation of the matrix to the tooth.

ACHIEVE HAEMOSTASIS . . . AESTHETICALLY

This viscous yet spreadable 25% aluminium chloride gel quickly stops minor bleeding and sulcular fluid without the mess of a liquid or paste.

- **SPECIALLY DESIGNED** for the aesthetic zone
- **TRANSPARENT GEL** stays on the sulcus
- **LEAVES NO RESIDUE** and rinses off easily
- **DOES NOT INTERFERE** with bonding

ASTRINGEDENT® U111

Astringedent haemostatic is an aqueous, 15.5% ferric sulfate solution with a pH of ~1.0. It's well suited for a variety of dental procedures, and because it's more aqueous than other haemostatic agents, it's ideal for soaking retraction cord.

- Known as the "classic" haemostatic agent
- Achieves profound haemostasis in seconds
- Eliminates sulcular fluid contamination for optimal bonding
- Decreases costly impression remakes

\$60.50 BOTTLE

Ultrapak® Knitted Cord

Available in six versatile sizes with and without epinephrine
Easy packing. Excellent absorption. Exceptional retraction.

Ultrapak is the original knitted cord, made of thousands of tiny interlocking loops that exert a continuous outward force following placement. Ultrapak is easier to place than braided cord and can be soaked in an astringent to ensure complete hemostasis during the entire procedure.

Ultrapak Refill

BioSonic® UC125

- New LCD technology offers customised operation
- Largest tank capacity in its class
- Loaded with useful features
- Operates at a very quiet 63 dB

The BioSonic Ultrasonic Cleaning Unit 125 delivers a variety of customised options for the dental practice. The time of the cleaning cycle can be selected individually. Additionally, a countdown timer is available to inform the user of the amount of cleaning time remaining, and indicate exactly when the instruments will be ready for sterilisation. This new cleaning unit is also equipped with a solution tracking function to inform the user how long the solution has been in use, so that mandatory changing of the cleaning solution will not be forgotten. With a simple touch of a button, degassing of the solution, i.e. air entrapments which hinder the cleaning process, will disappear.

NSK is going **green**

Renew. Recycle. Reuse.

Trade-in your old handpiece for an equivalent new NSK handpiece and receive **30% OFF**

Renew your practice by replacing your old handpieces with brand new NSK ones. NSK is doing our bit for the environment. Instead of ending up in land fill, the old handpieces will be either recycled, or will be passed onto a charity organisation for reuse in third world countries.

For more information contact your preferred dealer for return of your trade in handpiece.

This offer is for one old handpiece, of any brand, for one equivalent NSK handpiece. Valid until 30 April 2020.

*Not to be used in conjunction with any other NSK promotions.

ART BY RISKONTROL™

Infection Control Triplex Syringe Tips

- 4 Disposable
- 4 Non sterile single use, protecting you and your patients
- 4 Adaptors available to suit all major brands of equipment

Using Riskontrol air/water syringe tips protects practitioners and their patients against risks of direct or cross-contamination and eliminates the risk of microbial migration into the dental unit's air and water lines.

These flexible, bendable, single-use tips without shape memory are practical, quick to fit and remove. It is no longer necessary to clean, decontaminate and sterilise the original tip of your air/ water syringe (or ensure its traceability), which will save you a considerable amount of time. Riskontrol can be used on all types of syringes; a Riskontrol adaptor is available for all brands of equipment.

SERVOTOME

A new Impulse In Electrosurgery

Perform oral surgery on soft tissue quickly, precisely and safely precisely and safely

Product Benefits

30 WATTS IS ENOUGH

- Decreased wattage for greater efficiency.
- Thanks to the technology evolution associated with the conductive bracelet, 30 watts is enough to perform all dental incision and coagulation acts providing more safety.

PERFORMANCE

- Controlled power
- Reliable and reproducible setting
- Safer with maximal efficacy
- Less energy loss

RELIABLE AND COMPACT

- User-friendly for a fast setting up
- Only two potentiometers (incision and coagulation)
- Settings can be very finely adjusted according to the different types of tissues encountered

Main Characteristics

CLINICAL APPLICATIONS

- Incisions/Excisions
- Frenectomy
- Gingivoplasty
- Coagulation
- Abscess incision
- Exposure of impacted/retained teeth
- Gingivectomy etc.

CONDUCTIVE BRACELET

Best compromise for safety and convenience:

- Easy to install to enhance patient acceptance
- In direct contact with the patient's skin
- Easily disinfected
- Adjusted to a contact region with a low resistance
- Perfect size to avoid concentration of heat
- More security: in compliance with new standards

RESO-PAC A1155011

Adhesive Cellulose Based Wound Protection Dressing

- No mixing
- Easy to apply
- Odour-free
- No bad taste

A breakthrough in wound protection!

Reso-Pac is the first wound protection paste which:

- Adheres to damp and bleeding wounds to achieve haemostasis and protection against infection
- Is soft, easy to apply, stays securely in place and is comfortable for your patients
- Dissolves away slowly over 24-30 hours so does not need to be removed
- Is cellulose-based and non-allergenic
- Can be used as a medication carrier
- Is an essential aid for extractions, protection of sutures and many aspects of Implantology, Prosthetics & Periodontology

DENTAVISION ALGINATE

Quick - Easy - Clean. Makes a lasting impression.

Dentavision Alginate is a multi-purpose, dust-free alginate impression material that works quickly and easily. Dentavision Alginate creates a mixed creamy homogeneous consistency without excessive flow.

Dentavision Alginate is ideal for:

- Case study materials
- Orthodontic models
- Opposing models
- Mouthguards
- Bleaching trays
- Provisionals

Making Impressions Quick and Easy...

Dentavision Alginate is a highly versatile alginate impression material that is simple to use, easy to handle, and available in 2 formulations. Whether you choose **Dentavision Alginate Quick Set** (Apricot flavoured) or **Dentavision Chromatic Alginate Quick Set** (banana flavoured), both products are naturally hydrophilic and deliver precise impressions with an excellent reproduction of marginal details.

Making impressions safe and dust-free...

Dentavision Alginate's dust-free formulation is specifically designed to reduce the amount of airborne particles dispersed to exposed individuals, contributing to a healthier environment for you and your patients.

THE BRANDS YOU TRUST

VOCO STRUCTUR 2 SC

Self-curing composite material for the fabrication of provisional crowns and bridges

- Simple and fast working steps
- Less than 1 minute setting time in the mouth
- Easy to shape and polish
- Available in 8 shades for natural aesthetics
- Long-lasting temporaries
- High stability of shape and shade
- Very economical due to minimal material loss
- Natural fluorescence

\$178.00 EACH

ADMIRA® FUSION FLOW

Flowable light-curing nano-hybrid ORMOCER® restorative material

- Extremely low polymerisation shrinkage (2.75 % by volume)
- Inert, so excellent biocompatible and extremely resistant to discolouration
- "Flow-on-demand", ie. either flowable or stable on demand

\$145.00 EACH

ADMIRA® FUSION X-TRA

Nano-hybrid ORMOCER® restorative material, 4mm

- Bulk fill restoration material
- Extremely low polymerisation shrinkage (1.25 % by volume)
- Universal shade with chameleon effect

ADMIRA FUSION

Universal nano-hybrid ORMOCER restorative material

The worldwide first purely ceramic-based restorative material

- Pure Silicate Technology, i.e., fillers and resin matrix based purely on silicon oxide
- Contains no classic monomers

Thanks to the most innovative ORMOCER technology

- by far the lowest polymerisation shrinkage (1.25 % by volume) and particularly low level of shrinkage stress in comparison to all conventional restorative composites
- inert, so excellent biocompatible and extremely resistant to discolouration

Completely universal – meeting highest demands in anterior and posterior regions

- perfect coordination of translucence with opacity for natural results
- the optimal selection of shades enables highly flexible working using either the single or multiple shade system

Excellent handling, simple high-lustre polishing procedure coupled with high surface hardness guarantee first-class long-term results

Compatible with all conventional bonding agents

VOCO PROFLUORID VARNISH

Desensitising varnish with fluorides

Hypersensitivity

Sensitive teeth are a widespread problem for a large number of people. Usually, the condition causes only transient pain which patients do not always report to their dentists. Hypersensitivity is mainly caused by exposed dentinal tubules. Therefore, the aim of treatment is to seal these tubules.

Indications

Profluorid Varnish is a fluoride-containing varnish for treating hypersensitivity. Dentinal tubules exposed on the necks of teeth or after cavity preparation are effectively sealed.

Components and effect of VOCO Profluorid® Varnish

Profluorid Varnish is a colophony-based varnish containing 5 % sodium fluoride (22,600 ppm fluoride). The fluoride ion, together with the calcium ions accumulated in the tubules, causes a precipitation of calcium fluoride, which effectively seals the tubules. According to a user survey, over 85 % of patients were completely free of pain after only one treatment with Profluorid Varnish.

As well as rapidly sealing the dentinal tubules, Profluorid Varnish also causes calcium fluoride deposits to form on the tooth surface. These deposits protect the tooth from acid attacks, promote remineralisation and contribute to the long-term formation of fluoroapatite. Xylitol, which has a proven cariostatic effect in addition to its taste-enhancing properties, is also added to the varnish.

\$52.00 10ML TUBE

VOCO

ZIZINE ZIAGEL DV3000

Cherry flavoured translucent colourless gel

Zizine Ziagel is a Topical Dental Anaesthetic.

What it is used for

Cherry flavoured topical anaesthetic for the oral mucosa for use in children and adults when mint is contra-indicated to assist during dental procedures. Desensitises the mucous membranes prior to injections. Surface anaesthesia for the extirpation of deciduous teeth. Abscess incisions below the mucous membrane. Extraction of teeth with advanced periodontitis, allows adjustment and fitting of crowns and bridges. Allows Subgingival scaling.

\$77.00 EACH

ZIZINE ATO LIDOCAINE 2% DV1000

Zizine ATO Lidocaine 2% is a lignocaine and adrenaline injection dental block or infiltration.

What it is used for

Lignocaine solutions are indicated for the production of local anaesthesia in routine dental procedures and oral surgery by means of infiltration and nerve block techniques. Lignocaine solutions with adrenaline are recommended for oral surgery requiring prolonged duration of anaesthesia and haemostasis.

Indications

- Adrenaline 1:80,000
- Producing deep anaesthesia well tolerated by tissues with minimal toxicity
- 45 mins - infiltration
- 60 mins - block
- Long shelf life
- The standard Australian anaesthetic
- Glass mylar wrapped cartridges, eliminates risk of shattering - improves safety
- Terminal sterilised - the highest degree of sterility for safety
- 100% latex free including packaging
- 2.2ml aspirating cartridges

\$115.00 BOX OF 100

BUY 3 LIDOCAINE OR MEPIVICAINE AND GET AN ASPIRATING SYRINGE FREE

PENTHROX

MEMS260-MK2

"As simple as breathing..."

Penthrox (Methoxyflurane) is a medicine which is used to reduce pain. It is a clear, almost colourless liquid with a characteristic fruity smell that becomes a vapour or gas easily once it has been poured into the Penthrox Inhaler.

\$55.00 EACH

BADIJECT NEEDLES 30G

- Sterile, silicone coated dental needles with larger bore and bevel marking
- Whilst gauge is standard, bore is larger requiring less pressure to inject
- Threaded plastic hub
- Disposable non-resterilisable dental needles

\$15.40 BOX 100

ZIZINE ATO MEPIVICAINE 3% DV1001

- Rapid onset - 1.5 – 2 minutes
- Safe for paediatric patients • Safe for geriatric patients
- Longer duration of pulpal anaesthesia than other locals without a vasoconstrictor
- Recommended for use in patients where a vasoconstrictor is not indicated (at risk patients)
- Recommended for use in patients where lengthy pulpal anaesthesia is not required
- DPA Infiltration – 20-30 minutes Block – 45-60 minutes
- Short post anaesthetic period – approx 2 hours

FLUORODOSE®

FluoroDose Fluoride Varnish with Xylitol

centrix®

Making Dentistry Easier.™

Clinicians love that this product is smooth – not stringy or clumpy, unlike other products on the market. This reduces the chances of clogging your practice's vacuum lines. Patients love that it stays clear so there is no tooth discolouration. FluoroDose dries in seconds upon contact with saliva and remains on the tooth for 6 to 8 hours for optimum fluoride uptake.

FluoroDose contains 5% sodium fluoride, the maximum dosage allowed in a convenient singleuse LolliPack®. Each unit contains one single dose (0.3mL) of FluoroDose plus one Benda® Brush applicator which allows you to mix the varnish prior to application, guaranteeing a consistent level of fluoride in every application. Simply peel back the cover, dip in the brush, mix and apply. Centrix makes fluoride varnish safer and cleanup easier.

FEATURES

- Patients love the taste and feel of FluoroDose
- Unit-dose delivery allows for ease of use and cleanup
- Brush-on procedure is easier and safer to use than gels and rinses
- Dries in seconds upon contact with saliva
- Remains on tooth for 6 to 8 hours for optimum fluoride uptake
- Available in 5 great-tasting flavours: Caramel, Bubble Gum, Mint, Cherry and Melon
- 5% sodium fluoride (NaF) or 22,600 ppm of fluoride
- Contains Xylitol and Sucralose powder
- Best value on the market

Centrix makes asepsis and post-procedural cleanup easier. No more messy gels and uncomfortable trays; no more inherent worry of fluoride ingestion.

ALLERGEN RISK INFORMATION

FluoroDose is lactose free, gluten free and nut free. The product is free of all dairy, egg, gluten, soy, peanut, tree nuts, tree nut derivatives, fish/shellfish and seed products. FluoroDose contains rosin and beeswax and red dye 40.
